

NETWORK RAIL - MSC PROJECT MANAGEMENT

MSC in Project Management

Available at The University of Warwick and University College London

Our MSc in Project Management gives you the chance to work on some of the most pioneering projects around - with two of the UK's leading research universities. It's a structured MSc programme that lasts one year. We'll pay tuition fees and accommodation and you'll even receive a £5,000 bursary. All in all, it's the perfect opportunity to expand your skills and industry experience.

Your specific degree discipline or background doesn't matter, but you do need to be a high achiever with a minimum 2.2 or equivalent, and relevant skills and experience. If you can show that you've got drive and determination – and ideally prove it - we'll guarantee you an outstanding career on completion of the MSc.

We're at the heart of revitalising Britain's railway. Over the next five years we're investing £35bn on improving and developing the rail network. From the £5.5bn of improvements to the Thameslink route, the £600m Birmingham New Street Gateway project, the £300m upgrade of the Airdrie-Bathgate Rail Link, to Crossrail - we're a key partner, investing £2.3bn in upgrading our infrastructure around the capital.

If this sounds like the kind of company you'd like to be part of, you can choose Infrastructure Investment or Information Management - and whether you study the MSc at The University of Warwick or University College London (UCL), you'll gain the kind of knowledge and experience that helps you to realise your aspirations, faster.

Infrastructure Investment

Responsible for the delivery of infrastructure projects, we're always looking for new ways to improve – doing things quicker, at lower cost and to higher quality – by finding more effective ways of working. There are a great variety number of projects every year split between national programmes and major projects including Enhancements, Track, Construction, Signalling, Power & Communications, Railway Communications System, Crossrail and Thameslink.

Information Management

Our Information Management teams carry out some 150 IT projects every year and provide services to over 35,000 people and over 20 different train and freight operating companies. Not only does our IT play a crucial role in the lives of millions by delivering a safe and efficient network, but it also makes a difference to our bottom line.
